Description

the fields displayed in Item General Details - المنظمة للمواد العامة screen is a bulk and need a way to be separated

as the screenshot attached shows that many fields are displayed in a bulk,
this does not provide a good user experience when reading the data
so we need to find a way to separate the fields like the SRS mock up

there is an adf component (panel grid) can handle request layout but it effect on responsive layout design,
but css class can resolve this issue >
