Description

Calculating the profit margin on Price monitoring screen search result

the profit margin column should be filled with the profit margin calculated from the csv data
according to the formula

Profit margin = (sell price - cost price) \ cost price

----
we also need to implement an action in Price monitoring screen to choose a defined Profit margin,
and compare the defined margin with the calculated one and display if the COOP's margin is higher

- Assignee changed from Israa Naser to Tareq Abuhamra

the profit margin is calculated on inserting the item to PMON_DET_RAWDATA table and calculated successfully,,

however we still have the part of adding an action to select a defined profit margin to compare with the actual item's profit margin, Tariq could you please check ? thanks
